Human sentries fail often. And when they fail, they get soldiers killed.

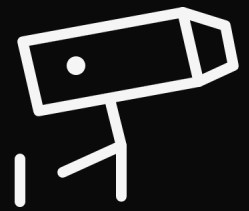

Status Quo

Human sentries

- Accuracy drops 15% in 30 min
- Costly shifts, gaps in coverage
- Blind in dark and smoke

Cameras

- Fail in dark, fog and dust
- Miss people who stand still
- Line of sight only

Incumbent radar

- $6K–$100K+ per unit
- ~200 units sold, ever
- Closed, proprietary systems

There is no affordable way to watch every fence line, in every condition.

Not one Canadian base should be exposed.

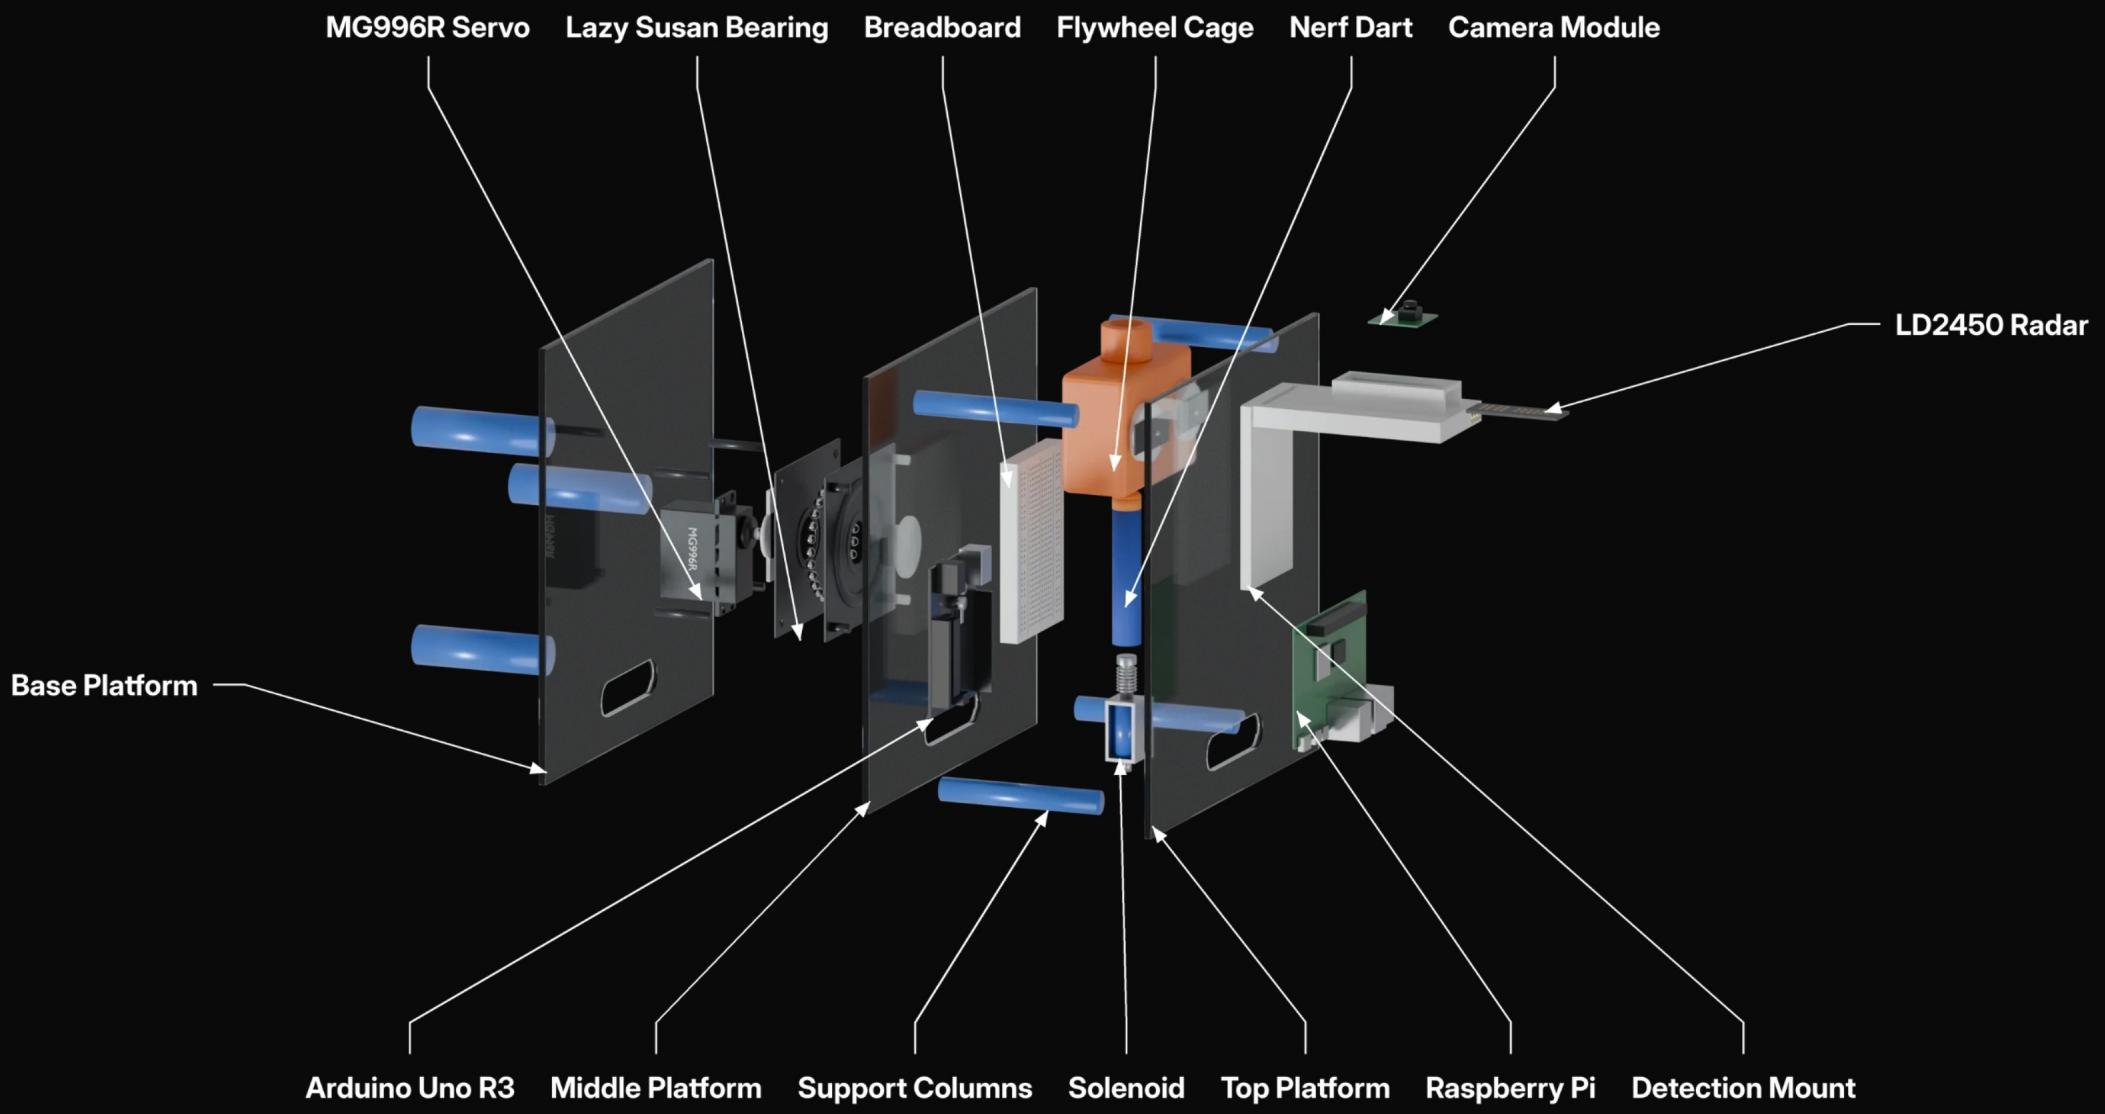

Not one Canadian soldier's life should be lost.

Heimdall

An automated radar sentry that guards every fence line, day or night, for a fraction of the cost.

Hardware Breakdown

Software Breakdown

Sense

Camera and radar

Detect

YOLO11n finds people in the frame

Fuse

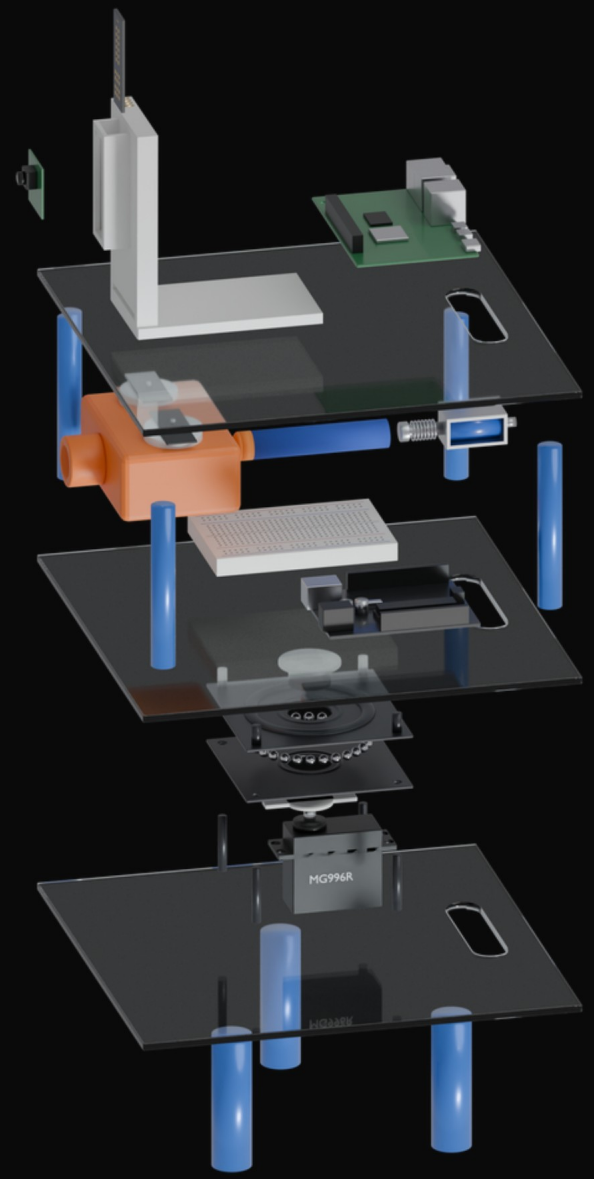

Camera and radar hits matched

Aim

Centers the two-layer build

Fire

Both sensors first, then camera only, then radar only
